About MandiGrid

MandiGrid is a web-based AgriTech dashboard designed around the “Mandi-to-Market Supply Chain Optimizer” problem.

- *Problem*

A State Agriculture Board needs a dashboard to monitor daily crop arrivals at local Mandis, track prices against the MSP, and correlate with weather data.

- *Solution*

MandiGrid takes messy agricultural data → cleans and standardizes it → combines the relevant information → displays it through a dashboard → allows users to ask questions and get insights.

TECH STACK

Frontend : React

UI & Styling : Tailwind CSS

Charts & Visualization : Recharts / Chart.js

Backend and API : Python , grok

Data Processing : Python, Pandas, NumPy

Deployment : Vercel

Data Sources : Mandi/market + MSP + Weather data

IMPACT AND SCOPE

Impact

- Centralized Data: Combines mandi, price, MSP & weather data.
- Better Insights: Helps track trends and identify price deviations.

Future Scope

- Prediction: Forecast crop arrivals and prices.
- Real-Time: Live data, alerts, and mobile support.

Thank you!
